ABSTRACT:

PROBLEM TO BE SOLVED: To surely respond to an incoming call from a specified caller when there are simultaneous incoming calls to plural housed lines.

SOLUTION: When a number coincident with a received caller number is registered as a one-action dial, an LED display 111 for displaying a state is flickered corresponding to that one-action dial button 110, and the state under call incoming is indicated. Especially, even when there are simultaneous two incoming calls using two channels to digital lines like ISDN lines, a user can recognize the desired party to first speak with and can surely respond to the incoming call from the desired party to first speak with.
